

personal dashboard software requirement specification

Personal dashboard to keep up with personal work & todos (tracking time, overview of task deadlines, eisenhower method, brag document), social connections & events (friend database, reconnection reminders), health & fitness (habits such as taking multivitamins & working out), daily journaling, maybe even study related stuff

work & todos

- add work category / job
- list work categories / jobs

todo management / planning

- add todo (name, description, deadline / priority)
- list todos
- start tracking time for job
- stop tracking time for job
- list time spent on a job in the last week

brag documents

right now the todos can be displayed in a table (work, todo name, deadline if any , priority, description),

in the future we could draw a dependency diagram

priority could be a number 1 through 3.

- 1 is the lowest priority (“nice to have”)
- 2 is the medium priority (“should have”)
- 3 is the highest priority (“as soon as possible”)

UI should come first
